

IN THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-39 (canceled).

40. (new) A method for recording an event, comprising:

obtaining a first set of visual data associated with the event using a first recording unit;

obtaining a second set of visual data associated with the event using a second recording unit; the second recording unit being physically separate from the first recording unit;

transmitting the first set of visual data to the second recording unit.

41. (new) A method for recording an event as recited in Claim 1, further comprising displaying the first set of visual data on the second recording unit.

42. (new) A method for recording an event as recited in Claim 1, wherein the first set of visual data is transmitted wirelessly to the second recording unit.

43. (new) A method for recording an event as recited in Claim 1, wherein the first set of visual data is transmitted wirelessly to the second recording unit, through a transmission channel select from a plurality of transmission channels.

44. (new) A method for recording an event as recited in Claim 1, further comprising transmitting an identifier indicating an origin of the first set of visual data.

45. (new) A method for recording an event as recited in Claim 1, further comprising storing the first set of visual data and the second set of visual data.

46. (new) A method for recording an event as recited in Claim 1, further comprising selectively storing one of the two sets of visual data.

47. (new) A method for recording an event as recited in Claim 1, wherein the first set of visual data sent to the second recording unit is compressed.

48. (new) A method for recording an event as recited in Claim 1, further comprising coordinating between the first recording unit and the second recording unit to synchronize the first set of visual data and the second set of visual data.

49. (new) A method for recording an event as recited in Claim 1, further comprising transmitting audio data from one of the recording units to the other.

50. (new) A method for recording an event as recited in Claim 1, further comprising displaying the first set of visual data on the second recording unit and switching to display the second set of visual data on the second recording unit.

51. (new) A recording unit for recording an event, comprising:

a data recorder configured to obtain a first set of visual data associated with the event using a first recording unit; and

a transmitter coupled to the data recorder, configured to transmit the first set of visual data to another recording unit configured to obtain a second set of visual data associated with the event.

52. (new) A portable recording unit for recording an event, comprising:

a visual data acquisition device configured to obtain visual recording data representing the content of the event; and

a marking module configured to receive at a marking time an indication that a portion of the visual recording data obtained at a marked time different from the marking time should be marked and to mark said portion in response to said indication.

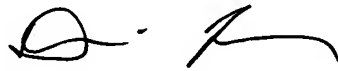

53. (new) A method for recording an event, comprising:

obtaining visual recording data representing the content of the event; and

receiving at a marking time an indication that a portion of the visual recording data obtained at a marked time different from the marking time should be marked.

Consideration of the application and allowance of all claims are respectfully requested based on the preceding remarks. If at any time the Examiner believes that an interview would be helpful, please contact the undersigned.

Respectfully submitted,

Diana Fu
